

TEREX TELELECT

Product Advisory

PA-1003-01

DATED: 5/30/01

REVISED:

MODEL(S): Material Handling Aerials

SUBJECT: Boom Tip Covers, **5TC, T5000, T4000, T3000, OM, and HR M series**

ATTN: Equipment owners and users:

We have been informed of situations where metal portions of the boom have contacted conductors or associated components. This contact has resulted in serious injury to workers who were in violation of OSHA regulations by not covering conductors or associated components and/or not wearing rubber gloves. To provide additional protection against product misuse, Terex is making available a new series of boom tip covers. Some of these are intended to be used in addition to existing covers and others will replace existing covers. These new Terex covers, depending upon condition and cleanliness, may give the operator certain limited protection in the event that contact is made with uncovered conductors or associated components due to product misuse. For these covers to provide additional protection against product misuse, it is of critical important that these covers be kept clean and in good condition and that operators follow safety regulations by covering lines and associated components.

We urge you to obtain and install these covers as soon as possible. Since we would like to encourage our customers to install these covers, we are offering them at our manufacturing cost. The installation costs are the responsibility of the owner.

See the Attached list to determine which kit is required. Contact your local Terex Telelect dealer to order. To find the dealer closest to you see the attached map. You can also go to www.Telelect.com web site. If you can not determine which kit to order, contact your dealer with your model and serial number.
